

**Banpu Launches New Corporate Video “Sustainable Energy”  
Showing Its Commitment to Providing Reliable, Affordable, and Eco-friendly Energy**

Amid rapid technological transformation, global energy demand continues to rise, primarily driven by the growth of artificial intelligence (AI) and data center expansion. Combined with geopolitical tension, and the global push toward achieving the Net Zero by 2050, these factors present significant challenges to current energy systems.

Banpu Public Company Limited, a versatile energy company, is proactively addressing these challenges through its ‘Sustainable Energy’ approach in delivering reliable, affordable, and eco-friendly energy. Under its ‘Energy Symphonics’ strategy, Banpu integrates diverse energy solutions in a balanced way to create added value across its business value chain and deliver long-term benefits to all stakeholders.

Mr. Sinon Vongkusolkrit, Chief Executive Officer of Banpu Public Company Limited, said, “Banpu is strongly committed to leading a responsible and sustainable energy transition. Achieving this goal requires a sustainable energy. We leverage technology to ensure our energy solutions meet the needs of today—such as the development of Carbon Sequestered Gas (CSG) products using carbon capture, utilization, and sequestration (CCUS), resulting in a stable and low-carbon energy source. Banpu is the first Thai company to invest in this field in the U.S. In parallel, we are expanding our clean energy and energy technology portfolios to support the kind of energy the future world needs. Recent examples include our investment in an energy storage system project in Australia and the development of a new battery farm project in Japan. These efforts not only strengthen our long-term business resilience but also play a vital role in driving the world toward a low-carbon society, contributing to a better future for all.”

Banpu’s recently launched corporate video offers a new perspective on ‘sustainable energy’, showcasing the vision for the future of energy through AI-generated visuals. The video features the symbol of a ‘Triangle’, representing the seamless connection of three key elements to achieve harmonized energy sustainability. These echo Banpu’s commitment to paving the way for a sustainable future for all. Watch the full video here: [ENG | Paving the way to a sustainable future | Full Version](#)
