Accelerating the Banpu Transformation

Additional investments in Greener, Smarter businesses through investments in:

Australia Solar

Beryl and Manildra solar farm in Australia with total capacity of **167 MW**

US Power

Signed PSA for the acquisition of natural gas power plant in Texas, Temple I CCGT with total capacity of **768 MW***

Strong cash flow generation across businesses

EBITDA improved by **12%** from last quarter with higher contribution from Coal and Gas businesses

Capital raising for future Greener, Smarter growth

Equity and debenture issuance to accelerate Greener, Smarter transformation

Continued increase in commodity price levels

Gas price increased to **\$3.79/MMBtu** and coal price increased to **\$131/t** for the quarter, driven by increasing demand and supply tightness

Innovating the energy ecosystem of the future

Continued implementation of solar rooftop and floating solutions, expansion of energy trading business and launch of new energy solutions

Banpu: continued ESG leadership and credit rating recognition

ESG RATING

Member of

Dow Jones Sustainability Indices

Powered by the S&P Global CSA

The DJSI, managed by S&P Global, is the leading international standard for corporate sustainability

Gold

Class on SAM Sustainability Award since 2015. In 2020, Banpu's combined ESG performance scores were 3x the industry average

MSCI ESG RATINGS

CCC B BB BBB **A** AA AAA

The MSCI ESG Ratings is managed by MSCI, one of the most experienced ESG performance measuring agencies

A

ratings for having a track record of managing the most significant ESG risks and opportunities relative to peers

Sustainability Award

Gold Class 2021

S&P Global

The Sustainability Yearbook 2021, published by S&P Global, showcases the sustainability performance of top companies

Gold

Class distinction, achieving an ESG score within 1% of the industry's top-performing company's score

The THSI, prepared by SET, shortlists Thai companies following the highest ESG standards

5th

consecutive year included in the THSI for sustainable operations in-line with responsible investment principles

CREDIT RATING

Asia Sustainability Reporting Awards

Asia's Best SDG Reporting

SILVER 2020

The ASRA, organized by CSRWorks International, is one of the most prestigious awards for corporate reporting in Asia

Silver

Class in Asia's Best SDG Reporting in 2020 for implementing strategy to support and achieve UN Sustainable Development Goals

PART OF
Moody's ESG Solutions

BEST EMERGING MARKET PERFORMERS

Ranking assessment by V.E, part of Moody's ESG Solutions, that recognizes companies in Emerging Markets for their ESG performance

Best Performer

Recognized as one of the top 100 Best Emerging Market Performers, out of a universe of 843 companies from 31 different countries

A Strategic Partner of S&P Global

As a strategic partner of S&P Global, Tris Rating has over 20-year experience as a leading credit rating agency in Thailand

A+

ratings with a '**stable**' outlook on the company and senior unsecured debentures reflecting the company's stable business growth

The Global Energy Transition: driven by natural gas and renewables

NATURAL GAS DEMAND

“Almost half of the increase in gas demand to 2040 is expected to come from the Asia Pacific region, driven by China and India as well as by emerging markets in South and Southeast Asia...North America’s gas production to account for about a quarter of global supply growth to 2040.”

WORLD PRIMARY ENERGY DEMAND, BY FUEL

Unit: Btoe

RENEWABLE INSTALLED CAPACITY

“Renewable energy and energy efficiency will work in synergy to drive global energy decarbonisation.”

“Around \$15.1 Tn is invested in new power capacity to 2050 in our Economic Transition Scenario... Around \$11 Tn, or 73%, goes to renewables ...Asia Pacific sees 45% of all new capital...”

Banpu's Greener, Smarter strategy: harnessing the 3Ds

BANPU AND THE 3Ds

Portfolio of renewable power plants including **solar** and **wind farms**, **gas assets**, **electric vehicles**, **HELE** and **CCGT power plants**

Driving **decentralized energy generation** and storage through **solar rooftop installation**, **energy storage systems**, and **smart city development**

Development of **energy management systems**, **operational excellence**, **energy trading**, and **e-mobility solutions**

KEY FIGURES

EBITDA **\$308 M**

Strong result driven by contribution from Coal and Gas business, as a result of high commodity price levels, alongside stable performance from other businesses

NPAT **\$42 M**

Strong performance supported by improved operational performance

ND/E **1.38 x**

ND/E improved from 1.39x in the previous quarter

KEY TAKEAWAYS

- 1 Robust Coal business performance:** from higher sales volume and ASP, compared to 1Q21, driven by recovering demand and increased market prices
- 2 Strong Core Gas business contribution:** supported by increase in average local price* and stable production volumes
- 3 Strategic positioning:** Coal and Gas businesses well-positioned to benefit from current commodity price levels and demand
- 4 Greener, Smarter investments:** cashflow generation to be captured from recent investments in Temple I CCGT, Australia Solar, and Nakoso IGCC

U.S. gas market update

RESILIENT DEMAND PROJECTION

- Majority of US gas demand is domestic consumption. Price determined by local demand and supply with indirect linkage to oil via associated gas production.
- U.S. gas consumption is expected to average 82.5 Bcf/d in 2021, slightly down from 2020 as power generators switch to coal due to rising natural gas prices. With the expanding economic activity and colder winter temperatures, residential, commercial and industrial natural gas consumption is expected to rise by 1.4 Bcf/d from 2020.
- U.S. gas production is expected to increase to 92.9 Bcf/d in 2H21 from 91.4 Bcf/d in 1H21 and continue to rise to 94.9 Bcf/d in 2022 driven by high natural gas and crude oil prices.
- Natural gas inventories ended July 2021 at almost 2.8 Tcf which is 6% lower than 5-year average due to higher natural gas withdrawals during the winter of 2020-21 as a result of drop in production from cold February temperature.

Source: IHS Markit report (July 2021) and Baker Hughes US natural gas rotary rig count (August 2021)

COMMENT

- Natural gas prices in 2Q21 declined from a spike caused by extreme weather conditions in the US in the previous quarter, but price levels are still higher than 4Q20
- Capital spending is expected to increase in 2021 and 2022 relative to 2020 in response to higher crude oil and natural gas prices, but remain low in total compared to 2015-2019 average
- With the increase in capital spending, oil and gas rigs are expected to continue to increase in 3Q21, up 16% from 2Q21 but remain at levels 47% lower than 1Q19
- Henry Hub futures signal a continued increase until 1Q22 as supply growth is expected to be insufficient to increase storage to a comfortable level heading into winter season

Global thermal coal market

COAL DEMAND AND SUPPLY CHANGE – 2021E VS 2020

Unit: Mt ■ SUPPLY ■ DEMAND

TRENDS

DEMAND

Global thermal coal prices look set to remain strong through the remainder of 2021 as stimulus and resumption of trade lead a strong economic recovery. Strong summer demand, tight supply and high gas prices also support coal burn. China's Australian coal ban has lifted global coal prices.

- **China:** Strong economic recovery and summer demand is expected to drive power demand amid domestic coal supply shortage. It is likely that the Chinese government will continue to relax import control.
- **India:** High coal price and high availability of domestic coal will deter import purchase.
- **JKT:** Warmer-than-usual weather, rising gas price and low nuclear availability will keep coal burn high in 2H2021.
- **Europe:** Strong power demand, high gas price and weak renewables generation encourage coal burn. Tight supply, high freight rate and a global commodities boom also help drive European coal price up.

SUPPLY

Tight supply continues as coal supply chains have been disrupted by Covid-19 and geopolitical tension. Rainfall and maintenance also contribute to weak supply recovery.

- **Indonesia:** Heavy rain, high domestic demand, Covid-19 and shortage of equipment supply will limit growth in 2H2021.
- **Australia:** Loss of Chinese demand has been absorbed by shipments into India and JKT but wash plant maintenance will restrict HCV output
- **Others:** South Africa export is expected to improve in 2H but locomotive issues and cable theft are constraining supply while high Richards Bay coal prices have been a deterrent to some buyers. Rail capacity and maintenance will keep Russian coal supply tight in 2H2021. US thermal coal export is expected to maintain in 2H2021, as labour shortages and limited rail capacity curb export growth.

Banpu ASPs vs thermal coal benchmark prices

BANPU ASP VS BENCHMARK PRICES

COMMENTS

- Coal price surge momentum continued into 2Q21 mainly as a result of strong demand together with tight supply. Newcastle coal price surged again from May, after a short-lived retreat during April.
- JPU Reference Price (USD109.97@GAR6322, for JFY2021 term, April 2021 – March 2022) was finally concluded in early June 2021.
- Unresolved China–Australia conflict led to the import ban by China, pushing up Indonesia Coal price since 2H2020, until April 2021, where certain coal qualities traded at premium over Newcastle price on heat equivalent basis. While from May, the high-quality Australian cargo gained back the premium against lower quality Indonesian coal.
- Newcastle future price, currently in significant backwardation, at around US\$120 for CY2022, still at very healthy price levels for the coal mining industry
- Group ASP in 2Q21 continue to increase, particularly for the export portion.
- Key price metrics:
 - ITM ASP 2Q21 : US\$81.0/t* (+18% QoQ)
 - CEY ASP 2Q21 : A\$89.8/t* (+12% QoQ)
 - ASP Domestic A\$74.1/t (-3% QoQ), ASP Export A\$117.3\$/t (+33% QoQ)
 - NEX (August 13th, 2021)**: US\$175.65/t

Note: * Includes post shipment price adjustments as well as traded coal

Banpu Mining: operational summary

2021E COAL OUTPUT

ROM PRODUCTION AND KEY UPDATES

AUSTRALIA COAL**

- Production was flat when compared to previous quarter, with Springvale impacted by complex geology, while Mandalong and Airly experienced extended changeovers.
- 3Q21 - anticipated improved conditions and reduced time in longwall changeover mode.

INDONESIA COAL*

- Due to continued unpredictable weather conditions, production achieved was slightly below target with lower production from Bharinto and Kitadin-Embalut, slightly offset by solid performance at Indominco.

CHINA & MONGOLIA COAL*

- Gaohe: Stable production amid continuous recovery of industrial activities and increase in demand as summer peak approaches.
- Hebi: Stable production despite complicated running conditions of LW panels and operation suspension between 4 June - 6 July resulting from the coal/gas outburst accident at Mine No.6.

Banpu Mining: average production cost breakdown

AUSTRALIA COAL – AVERAGE PRODUCTION COST¹

Unit: A\$/t

- Costs impacted by mining conditions, lower production and rising steel prices.
- Focus remains on improving production and cost performance.

INDONESIA COAL – AVERAGE TOTAL COST²

Unit: US\$/t

- Average total cost (excl. royalty) rose to US\$44/t in 2Q21 on the back of increasing fuel cost, while mining cost reduced slightly due to lower strip ratio.
- Higher royalty costs, as a result of rising coal price.

Growth update: Temple I – giant leap towards Greener, Smarter

TEMPLE I GAS FIRED POWER PLANT (CCGT)

- Location:** Bell County, Texas, US
- Total Capacity:** 768 MW
- COD:** 2014
- Total Acquisition:** US\$430 M*
- Deal close:** 4Q21

PROJECT HIGHLIGHTS

Banpu's US Gas subsidiary, BKV Corporation and Banpu Power, jointly signed a Purchase and Sale Agreement for the acquisition of a 100% stake in Temple I CCGT in August 2021

State of the art plant technology

Temple I is well-positioned to quickly respond to real-time market signals and capture growing demand in Electricity Reliability Council of Texas (ERCOT) market

Potential upside through synergies with Banpu's Barnett shale gas asset

The proximity to Banpu's Barnett shale allows physical gas supply to flow directly to the plant, creating potential newfound synergies

Potential for significant upside return

Opportunities from ongoing discussions with local municipalities, strategic buyers, and retail markets for significant upside for returns

Growth update: Temple I – key investment highlights

1 FAVORABLE ERCOT MARKET DYNAMICS

Retirements and load growth in ERCOT will tighten electricity supply-demand gap

Electricity demand in ERCOT is projected to outpace generation capacity in near term: Continuous coal plant retirements and increasing load growth will drive increases in electricity prices over the next several years

Retired

7.4 GW

between 2018-20

Announced

6.3 GW

to retire by 2022-26

Risk for retirement

Gas-fired

14 GW

> 40 years old

Coal-fired

11 GW

> 30 years old

Temple I is strategically positioned to supply major demand centers in the state with potential for long-term PPA deals

2 ONE OF THE MOST EFFICIENT AND FLEXIBLE CCGTS IN ERCOT

7
years old
Temple I

23
years old
Avg. ERCOT

Temple I is equipped with high efficiency, plant and gas turbine technology; making it well-positioned to substitute retiring capacities in ERCOT

HIGH EFFICIENCY

Temple I runs one of the lowest realized heat rates in ERCOT at 7,200 Btu/kWh

HIGH FLEXIBILITY

Low turn down ratio and fast response, allowing ramp up of **c.28 MW/minute** and full baseload capacity in 30 minutes. Temple I is equipped with winterization equipment.

ENVIRONMENTAL-FRIENDLY

Advanced emission controls in place with zero liquid discharge

3 ATTRACTIVE GAS TRANSPORT AND STORAGE AGREEMENTS

c.98% on imbalance charge is reduced compared to the previous gas transport agreement after renegotiation

\$1 M of annual fixed costs saved from storage contract renegotiation

Favorable natural gas arrangements making the plant one of the most flexible units in ERCOT

4 LONG TERM WATER SUPPLY AND WASTEWATER MANAGEMENT

Secured 30-year Effluent and Water Purchase Agreements with the City of Temple

Natural gas: reserve and production term

Reserve

DEFINITION

- Natural Gas Reserve Definitions in the US are defined by the SEC and are the same as used for oil:
 - Proved Developed Producing (PDP)
 - Proved Developed Not Producing (PDNP)
 - Proved Undeveloped (adjacent to a producing well) (PUD)
 - Probable (in the same area as production but not adjacent) (PROB)
 - Possible (contingent on additional drilling) (POSS)
- Reserves have to be economically viable.

Production

PRODUCTION UNIT

- In the US, production is measured in 1000 cubic feet (MCF)
 - 1000 MCF = 1 MMCF
 - 1,000,000 MCF = 1 BCF
 - 1000 BCF = 1 TCF
 - 1 MCF = 28.3 Meters³
 - 1 MCF = 1.0 Million BTU (MMBTU) or Decatherms (dry gas)
 - 1 BCF = 1.0 Trillion BTU
 - 1 Meter³ = 35.3 MCF
 - 1 Billion Meters³ = 35.3 BCF

GCP&T costs	\$1.07 - \$1.14	Gathering, compression, fractionation and transportation costs
Pipeline revenue	\$0.02 - \$0.05	Applicable to Chaffee Corners volume only
COSTS		
Lease operating expense	\$0.40 - \$0.47	Main component of operating costs
G&A	\$0.24 - \$0.29	Recurring general and administration costs
Taxes	21%	Currently benefit from tax shield due to accelerated DD&A
DD&A	\$0.42 - \$0.48	Depreciation, depletion and amortization
Drilling and completion costs	\$0.22 - \$0.28	Costs incurred to drill and to make the well ready for production

China: strong demand and supply tightness driven coal prices

CHINA THERMAL COAL IMPORTS/EXPORTS*

Unit: Mt

CHINA DOMESTIC COAL PRICES

Unit: RMB/t

Note: *Includes lignite but excludes anthracite imports/exports
Source: www.sxcoal.com/cn 9 August 2021

2Q21

- Soaring domestic coal prices were supported by strong demand and tight supply.
- Strong thermal coal demand in Q2 was driven by a robust economy and strong thermal generation due to weak hydro generation and hotter-than-normal weather.
- Domestic supply contracted in Q2 due to various safety and environmental inspections.
- Central government has asked mines to increase output, but we have not seen any significant increase as mines primarily focus on safety rather than increasing output. Several serious accidents occurred in May and June, making safety the top issue in the run-up to the Communist Party of China's centenary on 1 July.
- Soaring prices have led to the suspension of various Chinese domestic thermal coal price indices on 11 May in a means to stabilize the market.
- Import restrictions have been suspended in many provinces in June resulting in increased import volume.
- Ban on Australian coal continues to support non-Australian coal prices.

OUTLOOK

- Power demand in Q3 will be driven by warm weather, while demand from industrial sector is expected to remain strong.
- Heavy rainfall and rising mine safety concerns has slowed domestic coal production recovery. We expect domestic supply tightness will continue in Q3.
- It is anticipated that China will continue relaxing coal import restrictions during Q3 (or probably until the end of the year) to offset the domestic coal supply shortage and control the rise in coal prices.
- Thermal coal imports are expected to increase in July and August as shipping data suggests that thermal coal arrivals have been strong. However, this will not ease the supply tightness since imports increase will occur in the peak demand period. China's ban on Australian coal will continue.

India: coal generation up despite lockdown

INDIA THERMAL COAL IMPORTS*

Unit: Mt

Note: *Includes lignite grade imports
Source: Commodity Insights, Banpu MS&L

2Q21

- Indian economy has been hit by lockdown in May/June to control the second wave of Covid-19 infections. However, the restrictions have eased gradually from mid-June, and industries are coming back to normalcy.
- Estimated coal-fired generation in Q2 was up 28% YoY, leading to a 34% increase in coal consumption at power plants.
- Coal India Limited (CIL) produced 124 Mt of coal in Q2, up by 2% YoY. CIL's coal dispatch was significantly higher than its output as it includes coal shipped from its inventory. Q2 dispatch was 160 Mt, increased by 33% on the year, leading to stock reducing to about 64 Mt by the end of June versus 100 Mt in Q1.
- Thermal coal imports in Q2 was 33 Mt, down 4% QoQ but up by 25% YoY. Demand for stock building ahead of monsoon season supported imports while global coal price spike pushed Indian buyers to defer their purchases.
- Cement demand was squeezed in April and May; however, the impact was less severe in government-aided projects.
- Indian buyers continued to increase purchase of Australian coal due to high Indonesian and South African coal prices.

Outlook

- Q3 imports are expected to remain dampened by high coal prices and monsoon season. The heavy rains will lead to more hydropower, weak industrial activity and lower overall power demand, decreasing the need for coal generation.
- Slowed coal-fired generation and a higher availability of domestic coal might have weighed on thermal coal imports by power plants.
- Sponge iron prices have recovered in Q2 and stable production is expected for the rest of the year, but high coal prices may delay its purchases.

Coal quarterly output summary

AUSTRALIA OPERATIONS: COAL OUTPUT (MT) – ROM OUTPUT ON EQUITY BASIS

Mines	CV (kcal/kg)*	4Q20	1Q21	2Q21	3Q21e
