3Q20 highlights and outlook

Strong cash flow generation across businesses

EBITDA improved from the last quarter with higher contribution from Coal and Gas businesses

Barnett acquisition completion by 1 Oct

Completion accelerated to secure early profit realization and take advantage of gas price recovery in Q4

Gas price rising on increasing demand

Gas price rebounds (>\$3.00/MMbtu since Oct) as demand increases with winter approaching

Continued progress on achieving cost reduction target

Maintaining smooth operations while continuing on planned cost reduction of 20% across all operations

Greener Smarter energy development

Expansion of renewables, solar rooftop and floating solar portfolio with addition of 86 MW committed capacity

Innovating the energy ecosystem of the future

Launch of E-Prompt Move and EV Car Sharing and acquisition of Waste Management company

Changing political and Covid-19 landscape

Biden: outlook on fossil fuels

Biden's Climate Plan could **potentially ban 'new fracking'** on **Federal lands**, creating potential for a significant **natural gas supply shortfall**

c.14%

of US natural gas production

is accounted by fracking on federal lands and water

Estimated natural gas supply shortfall of >5% by 2030

With declining wells, supply from existing operations on Federal lands will decrease significantly

Banpu gas business is well-positioned

Minimal exposure to fracking on Federal lands (c. 1.6%), positioned to fill in supply gap and capture value from higher price outlook

Viruses and vaccines

Pfizer and BioNTech announced their Covid-19, mRNA based vaccine candidate, **BNT162** on November 9th, 2020.

More than 90% effective

in Covid-19 prevention based on Phase 3 preliminary analysis with sample size of c.44,500 participants

50 million doses

enough to cover **25 million people** by end of 2020; **1.3 bn doses** target in 2021

Positive market sentiment

Dow Jones soared more than 830 points (+3%) in one day, right after the announcement of Pfizer and BioNTech's vaccine candidate

Banpu Gas: accelerated Barnett transaction

Note: *The acquisition metrics are based on effective time of the acquisition (Sept'19), **Subject to contingency payments dependent on WTI and Henry Hub prices from 2021-2025
Source: IHS Markit

Barnett has shown resilience to lower gas prices

BARNETT'S EBITDA DURING LOW GAS AND OIL PRICES

Barnett EBITDA from 1Q20 to 3Q20 are calculated from preliminary settlement during interim period under the PSA term & condition and not consolidated in Banpu's financial results.

- During the Covid-19 pandemic, Barnett still generated positive cash flow under distressed commodities prices.
- Lower Henry Hub differential, as it is located close to Texas, the largest gas-consuming state.
- High free cash flow due to lower capex requirement to maintain base production.
- Established wells data helped facilitate cost rationalization.

Banpu Gas: synergies between assets to drive greater value

MARCELLUS

- Located in Marcellus “Super Core” area, best acreage for gas production in the US
- Low breakeven costs
- Greater access to domestic demand from new pipelines

~200 MMcfd
net production

~1.0 Tcfe
1P reserves

ASSET SYNERGIES

- 1 Diversified portfolio**
Natural gas liquids exposure, Marcellus and Gulf coast pricing basis
- 2 Technology sharing**
Field automation and wells data
- 3 Economies of scale**
Lower cost for gas marketing, vendors negotiations and internal G&A
- 4 Flexibility to capture price fly-ups**
Flexible capex to conserve cash in the downturn

BARNETT

- Located in largest gas-consuming state in the US, Texas
- Access to export market
- Natural gas liquids (NGLs) c. 30% of production volume
- Long reserve life, low capex

~597 MMcfd
net production

~3.5 Tcfe
1P reserves

Gas price expected to improve with falling production and storage

Banpu: growth opportunities across the gas value chain

BKV CORPORATION

STRATEGY GOING FORWARD

UPSTREAM ACQUISITIONS

- Focus on synergistic acquisitions, capturing opportunities at a discount during this buying window

MIDSTREAM ACQUISITIONS

- Explore investment opportunities in midstream gas pipelines and infrastructure

ASSET ENHANCEMENT

- Maintain our base production volume and improve reserves life with effective production development program

OPERATIONAL IMPROVEMENTS

- Enhance efficiencies and cost efficiencies through technology transfer from Barnett (incl. field automation, real-time monitoring)
- Improve margins through gas marketing and operational excellence

- *Growth platform for Banpu US gas business*
- *Ability to raise capital for future growth pipeline*
- *Increased control for Banpu's long-term control over US gas business*

U.S. gas market update

RESILIENT DEMAND PROJECTION

- Majority of US gas demand is domestic consumption. Price determined by local demand and supply with indirect linkage to oil via associated gas production.
- Despite Covid-19 and economic slowdown, demand remains resilient, with consumption in 3Q20 very steady compared to 3Q19.
- Production averages 90 Bcfd in 3Q20 (-4% YoY) amidst sharp drop in drilling activity (rig count decline), production curtailment and bankruptcies.
- Strong sign of recovery emerges in 4Q20 supported by rising winter demand and structural production decline. These will be the tailwinds supporting the price rally in the medium term as we enter winter.

Note: *consumption is adjusted to include export
Source: EIA

US NATURAL GAS PRODUCTION

US NATURAL GAS PRODUCTION VS CONSUMPTION

U.S. gas: declining production will support gas price outlook

US RIG COUNT VS HENRY HUB PRICE

US OIL AND NATURAL GAS RIG COUNT

Unit: Rigs

HENRY HUB SPOT PRICE

Unit: \$/MMBtu

COMMENT

- Major US gas producers have announced capital spending reduction by 15-30% in response to impact from Covid-19.
- Oil rigs down 67% to 221, gas rigs down 45% to 72 YTD; fewest since 2016
- Decline in rig count and reduction in capital spending indicate lower gas production (associated gas from oil wells and from gas wells)
- Henry Hub futures signal an increase as domestic demand remains stable vs. decline in gas supply.

Note: *as of Oct 30th, 2020

Source: IHS Markit report, WoodMac research and Baker Hughes US natural gas rotary rig count (October 2020)

Global thermal coal market

COAL DEMAND AND SUPPLY CHANGE – 2020E VS 2019

Unit: Mt ■ SUPPLY ■ DEMAND

TRENDS

DEMAND

Industrial activity has been recovering gradually from disruption caused by Covid-19. Expected colder winter set to drive thermal coal demand in the Northern Hemisphere. Risk on the second wave of Covid-19 remains.

- **China:** Continued economic recovery. High stocks and improving domestic production seems continued import restrictions.
- **India:** Economic reopening and high pet coke prices support imported coal demand although government pushes for domestic coal use.
- **JKT:** Economic coal-to-gas switching reduced coal burn in Q3.
- **Europe:** Coal demand fundamentals are improving with increasing natural gas prices and weak renewable output.

SUPPLY

Production cut continues with tighter supply of HCV product while LCV coal still oversupply. Low spot prices unlikely to continue for long due to lower than several producers' costs.

- **Indonesia:** Continued production decline due to weak demand. Indonesian miners made an effort to cut production, but the scale is insufficient to rebalance the market.
- **Australia:** Thermal coal exports stable despite China import ban. Shipments are being bolstered by increased demand from economies outside of China that are reopening following Covid-19 lockdowns.
- **Others:** Significant Colombian production cut due to low prices and key producers suspended operations. Improved Indian demand post monsoon supports South African exports. Weakened ruble helped to improve competitiveness of Russian coal both in Atlantic and Pacific.

Banpu ASPs vs thermal coal benchmark prices

BANPU ASP VS BENCHMARK PRICES

Unit: US\$/t; A\$/t for CEY

COMMENTS

- NEX has recovered since late September mainly from supply cuts.
- Bottom has passed but demand remains subdued as Covid-19 surges in few areas, however high demand is expected as winter is around the corner and restocking to prepare for heating will soon commence.
- China domestic vs. import price gap widening increases demand for import but is suppressed due strict control by the government. Anticipation of 2021 quota reset has strengthen the Indonesia coal price.
- ASP in Q4 is expected to shadow the price recovery trend.
- Key price metrics:
 - ITM ASP: US\$49.1/t* (-7% QoQ)
 - CEY ASP: A\$79/t* (-3% QoQ)
 - NEX (November 20th, 2020)**: US\$62.2/t

Note: * Includes post shipment price adjustments as well as traded coal

- Western operations were down, compared to last quarter, with a longwall move at Springvale and NPE panel move at Airly
- Northern operations production was up, with a monthly production record at Mandalong prior to a longwall move, partly offset by Myuna's poor performance.
- Lower Indominco output due to heavy rainfall slightly balanced out by Trubaindo higher production.
- Gaohe: Lower production in Q3 due to weak market and lithology change (sinkhole).
- Hebi: Higher production in Q3 with Longwall panel 3201 starting production during August.

Banpu Mining: average production cost breakdown

AUSTRALIAN COAL – AVERAGE PRODUCTION COST¹

Unit: A\$/t

- Costs impacted by mining conditions and more frequent longwall relocations.
- Lower labour and amortisation, partly offset by higher R&M and deferrals, with Airly, Mandalong & Springvale all undertaking panel moves in the quarter.
- Continued cost reduction in contractor labour and overheads targeted to further drive costs down.

INDONESIAN COAL – AVERAGE TOTAL COST²

Unit: US\$/t

- Average total cost reduced further due to lower mining cost, driven by lower strip ratio, and lower royalty in 3Q20.
- Progressing on to reduce average total cost for the whole year to target \$50/t.

Note: 1 These figures do not include selling, distribution and royalty costs; based on 'sold' production, 2 Coal business only, 3 including repair and maintenance, salaries and allowances, inventory adjustment, others etc., *indicative target

Banpu Energy Technology 3Q20: updates

CAPACITY EXPANSION

SECURED FLOATING SOLAR CONTRACT

First to secure floating solar electricity sale contract to a private customer, with contracted capacity of 16 MW

3-SOLAR ROOFTOP CONTRACT SECURED

with total capacity of 2.6 MW, increasing the Banpu NEXT's total contracted capacity to 20 MW

SUNSEAP CAPACITY EXPANSION

Added 32.2 MW of solar rooftop capacity increasing Sunseap's total capacity to 186 MW

NEW PRODUCT LAUNCH

E-PROMPT MOVE LAUNCH

Delivered 20 units of E-Prompt Move, which integrates solar panels and stationery storage, adding 600 kWh to the total capacity

ELECTRICITY SALES

AWARDED A SUPPLY CONTRACT

Awarded a contract to supply 41 GWh electricity to a water treatment center in Nara from November 2020 - October 2021

ELECTRICITY SUPPLY AGREEMENT

to deliver 52 GWh electricity to two end-user clients from November 2020 - October 2021

*Achieved lithium-ion battery sales of 0.28 GWh on equity basis in 3Q20

Banpu Energy Technology 3Q20: updates (cont'd)

E-MOBILITY SOLUTIONS

E-TUKTUK SERVICES MOU SIGNED

Between Banpu NEXT Green leasing, Urban Mobility Tech, and Thammasat University to provide ride hailing services at Rangsit campus

EV CAR SHARING LAUNCH

Banpu NEXT introduced FOMM car sharing through Haup Car platform with a plan to increase to 100 FOMM cars to serve sharing business

E-FERRY PRODUCT DELIVERY

Delivered and commercially operated E-Ferry for maritime transportation in Phuket

SMART CITY SOLUTIONS

MOU SIGNED FOR KHON KAEN SMART CITY DEVELOPMENT

In collaboration with Khon Kaen City Development (KKTT), Banpu will conduct a feasibility study on the province's adoption of clean energy ecosystem

25% STAKE ACQUISITION IN WASTE MGMT. COMPANY

Invested \$0.4 M in GEPP Sa-Ard, which provides end-to-end solutions for waste management, particularly to residential and commercial customers

APPENDIX

U.S. gas market update

AVERAGE HENRY HUB PRICE AS OF OCTOBER 2020

Unit: US\$/MMBtu

- **Gas Price:** Henry Hub natural gas spot price averaged 2.4/MMBtu in October, up from an average of \$1.9/ MMBtu in September due to stronger demand for LNG exports as LNG terminals increased liquefaction following hurricane-related disruptions in August and September.
- The recovery is trending back on track again during the second week of October as positive signs emerge: 1) Post-storm LNG feed gas recovery, 2) Lower-than-normal injection in Oct due to production downgrade and higher power demand, and 3) Early cold front weather.
- **Outlook:** We remain bullish for natural gas from this winter onward, expecting that rising domestic demand for natural gas and demand for LNG exports heading into winter, combined with reduced production, will cause Henry Hub prices to spike up again this winter and in the medium term.

US NATURAL GAS PRODUCTION VS CONSUMPTION

Unit: Bcf/d

U.S. STORAGE LEVEL

Unit: Bcf

Natural gas: reserve and production term

Reserve

DEFINITION

- Natural Gas Reserve Definitions in the US are defined by the SEC and are the same as used for oil:
 - Proved Developed Producing (PDP)
 - Proved Developed Not Producing (PDNP)
 - Proved Undeveloped (adjacent to a producing well) (PUD)
 - Probable (in the same area as production but not adjacent) (PROB)
 - Possible (contingent on additional drilling) (POSS)
- Reserves have to be economically viable.

Production

PRODUCTION UNIT

- In the US, production is measured in 1000 cubic feet (MCF)
 - 1000 MCF = 1 MMCF
 - 1,000,000 MCF = 1 BCF
 - 1000 BCF = 1 TCF
 - 1 MCF = 28.3 Meters³
 - 1 MCF = 1.0 Million BTU (MMBTU) or Decatherms (dry gas)
 - 1 BCF = 1.0 Trillion BTU
 - 1 Meter³ = 35.3 MCF
 - 1 Billion Meters³ = 35.3 BCF

China: tight domestic supply ahead of winter demand

CHINA THERMAL COAL IMPORTS/EXPORTS*

Unit: Mt

CHINA DOMESTIC COAL PRICES

Unit: RMB/t

Note: *Includes lignite but excludes anthracite imports/exports
Source: www.sxcoal.com/cn 13 October 2020

3Q20

- Government's economic stimulation measures bring large investment in the infrastructure, offsetting the damage done by the Covid-19 outbreak.
- Floods in southern China and strong hydro generation weakened thermal coal demand in Q3.
- Rail transport on the Daqin line was disrupted by derailments and maintenance which reduced availability of spot materials at ports and raise domestic coal prices.
- Domestic coal supply remains constrained. Anti-corruption investigation in Inner Mongolia and safety checks have tightened domestic supply.
- Thermal coal import in Q3 fell 39% from a year ago with some ports close to exhausting annual import quotas. China continues to tighten its import restrictions which pressured seaborne coal prices.
- Australian cargoes continued facing prolonged waiting periods at Chinese ports, resulting in large numbers of Australian cargoes waiting at Chinese ports for more than three months.

OUTLOOK

- Most large Chinese coal importers have suspended of purchasing Australian coal since mid-October after the government issued verbal warnings to some companies to halt buying.
- Chinese buyers increased purchases of other origin coals such as Indonesia / Russia to replace Australian coal which support coal prices of that origins.
- Government pushes efforts to raise domestic supply to meet strong winter demand.
- Hydro generation is expected to grow on the year in October on expected stronger rainfall levels.
- Expected colder-than-normal winter will boost coal demand.
- However, government is unlikely to relax import quotas in Q4 due to high stocks at power plants and domestic coal production starts to improve.

India: pathway to recovery post lockdown

INDIA THERMAL COAL IMPORTS*

Unit: Mt

Note: *Includes lignite grade imports
Source: Commodity Insights, Banpu MS&L

3Q20

- Thermal coal demand witnessed a revival in Q3 after reopening of economic activities post lockdown though the pandemic situation continues.
- Government continued pushing to revive demand in the short term by several measures including easing out liquidity position and lowering of interest rates.
- Total power generation in Q3-2020 was up by 15% QoQ but down by 0.03% versus Q3 last year. Coal-fired generation in Q3-2020 was up by 15% QoQ and marginally up 1% on the year.
- Thermal coal imports recovered in Q3 as construction season has commenced supporting demand from cement and steel industries.
- Restocking activities post the monsoon season, supporting thermal coal imports growth in September
- High pet coke prices continued support thermal coal import into cement industry.
- High inventory drive Coal India Limited (CIL) to push more domestic thermal coal to both power and non-power sector in Q3.

Outlook

- With most of economic activities resumed, we expected steady recovery in industrial activities.
- Most of large private still mills are back to their pre-pandemic rates.
- CIL will continue offer large volume in the spot market in Q4.
- Government announced stimulus package of about US\$266bn in Q2 to revive growth which likely to boost economy in medium to long term.
- Rebound in domestic coal consumption supports the prospects of a recovery in demand for imported coal although government continues to push for greater use of domestic coal.

Coal quarterly output summary

AUSTRALIA OPERATIONS: COAL OUTPUT (MT) – ROM OUTPUT ON EQUITY BASIS

Mines	CV (kcal/kg)*	3Q19	2Q20	3Q20	4Q20e
Western operations		1.0	1.8	1.1	2.3
Springvale	6,700	0.1	0.9	0.3	1.4
Clarence	6,700	0.5	0.5	0.5	0.6
Airly	6,700	0.4	0.4	0.4	0.3
Northern operations		1.8	1.5	1.7	1.3

Australia coal: quarterly equity rom output

Note: 1 Production generally responds to the timing of longwall changeovers (i.e. lower production results during a longwall changeover period)
2 As of 1 December 2019, Centennial's economic interest in each of Angus Place and Springvale became 100%.
