2021 highlights and recent updates

Accelerating the Banpu Transformation

Significant progress in Greener, Smarter businesses through developments in:

US & Japan Power

+841 MW operating capacity from acquisition of Temple I CCGT and completion of Nakoso IGCC

Australia, Vietnam and Japan Renewables

+320 MW operating capacity from acquisitions of 6 assets and a Vietnam solar rooftop platform and completion of 2 assets

Energy Technology

Investments in Beyond Green, EVolt Technology and Engie Services (Thailand)*

Robust Cash Flow Generation

EBITDA for 2021 increased to **\$1,778 M**, improving **216%** from 2020 with higher contribution from Coal and Gas businesses, significant incremental contribution from Greener assets

Capital Raising for *Greener, Smarter* Transition

Equity and debenture issuance to accelerate the transition and strengthen Banpu's capital structure

Energy Prices Strong

Gas price averages at **\$3.89/MMBtu** and coal price averages at **\$138/t** in 2021, driven by increasing demand and supply tightness

Strong ESG Progress

ESG committee establishment as well as ESG recognitions and awards from 8 respected global and local institutions

Banpu: ESG leadership and credit rating recognition

BANPU ESG RATING

A

rating for third consecutive year for demonstrating resiliency towards long-term ESG risks and excellent risk management and mitigation relative to peers

Sustainability Award
Gold Class 2022
S&P Global

Gold

class distinction, the only company in the industry out of 29 companies being assessed to achieve the award

Silver class

in Asia's Best SDG Reporting in 2020 for implementing strategy to support and achieve UN Sustainable Development Goals

Best Performer

Recognized as one of the top 100 Best Emerging Market Performers, out of a universe of 843 companies from 31 different countries

Member of
Dow Jones Sustainability Indices
Powered by the S&P Global CSA

8th

consecutive year included as a constituent of DJSI for conducting business with the highest ESG standards

Silver

for Sustainability Reporting Award in 2021 for transparent disclosure of ESG information

6th

consecutive year in the THSI for sustainable operations and responsible investment principles

Honor

Highest distinction in SET's Sustainability Excellence Award for being awarded the Best Sustainability Award for at least 3 consecutive years

Banpu: integrated energy solutions provider

- Pan-Pacific Rim integrated energy solutions group: **resources, generation, technology**
 - Pioneering development and change in the energy sector since 1983: *adaptable, agile*
 - Leading a responsible transition to more sustainable energy in the region

2021 year review: energy resources

BANPU ENERGY RESOURCES

POSITIONING FOR THE FUTURE

Through continuous decarbonization by integrating green energy sources and emission reduction initiatives into our operations; as well as studying high-growth, high-value opportunities across the value chain.

PORTFOLIO OVERVIEW

GAS

WELL-POSITIONED TO SCALE UP

with opportunities to synergize with existing power businesses

MINING

MAXIMIZE PROFITABILITY OF OUR RESERVES

to generate cash flow for further acceleration of *Greener, Smarter* business

IMPROVING SUSTAINABLE OPERATIONS 2021-2022 YTD

STRONG BASE PRODUCTION, RESERVE EXTENSION

Base production efficiently maintained throughout the year, overcoming natural decline of gas well production. Acceleration of Value Driven Initiatives (VDI) in a solid pricing environment, capturing upside with 1P Reserve extension of gas assets by 564 Bcfe..

CONTINUOUS DECARBONIZATION

Continued implementation of Scope 1 & 2 emission reduction program utilizing best-in-class technologies and operational methods, i.e., methane leak detection, methane capture, etc.

EXPLORING NEW VENTURES

Exploration of potential investments in strategic minerals with high growth, leveraging energy trends; as well as other clean technology opportunities.

GREENER OPERATION INITIATIVES

Operation of solar PV at Bontang coal terminal with further development plans to integrate solar energy to Melak port to ensure clean and continuous power supply. Implementation of digital solutions to improve monitoring and cost control across operations.

3Q21

Banpu strategy 2022-2025: onwards and upwards

ENERGY RESOURCES

MINING

Production optimization and cost rationalization to maximize value from existing reserves to generate cashflow to accelerate Greener, Smarter businesses.

Playing to our strengths

Explore non-coal mining opportunities with high growth potential, such as strategic minerals

GAS

Continued focusing on capturing price fly-ups through production ramp up with capex flexibility to maximize cash flow generation further supporting Greener, Smarter transition.

Vertical Integration

Pursue midstream and power opportunities accretive and synergistic to upstream gas assets.

ENERGY GENERATION

THERMAL

Continued implementation of initiatives to maximize plant efficiency while reducing emissions.

Greener baseload power

Seek opportunities to invest into Greener, Smarter thermal assets utilizing HELE with high return upside.

RENEWABLES

Maximize efficiency of operating assets while ensuring on-time commissioning of developing projects.

Cleaner energy generation

Grow and diversify renewables portfolio in high-growth regions, as well as regions with Banpu presence

ACCELERATING THE GREENER, SMARTER TRANSFORMATION

ENERGY TECHNOLOGY

Scale up energy technology portfolio by expanding existing energy services, including e-mobility, battery production, energy and waste management.

Acquire and develop new energy-related services with a focus on building competency and integration of services into a single digital platform.

KEY TAKEAWAYS

- 1 Robust Coal business performance:** from significantly higher ASP, due to supply tightness and lack of availability amidst robust demand
- 2 Significant Core Gas business contribution:** led by substantial increase in gas sales volume and supported by increase in average local price* as low storage levels continue
- 3 Strategically-positioned Energy Resources business:** Coal and Gas businesses well-positioned to benefit from current and near-term commodity price levels and demand
- 4 Greener cashflow:** cashflow generation captured from new investments including Nakoso IGCC, Temple I CGGT, Australia Solar, Vietnam Wind and Japan Solar. Future near-term cashflow to be captured from new Greener, Smarter investments (i.e. Vietnam Solar)

U.S. gas market update

RESILIENT DEMAND PROJECTION

- Majority of US gas demand is domestic consumption. Price is determined by local demand and supply with indirect linkage to oil via associated gas production.
- U.S. gas production averaged at 95.5 Bcf/d in January, down 2.1 Bcf/d from December 2021 due to freezing temperature in certain producing regions. Gas production is forecasted to average at 96.1 Bcf/d for 2022 up from 93.5 in 2021, driven by high natural gas and crude oil price levels supporting drilling activities.
- U.S. LNG exports averaged at 11.2 Bcf/d in January, up 0.8 Bcf/d from 4Q21, supported by large price differences between Henry Hub prices in the U.S. and spot prices in Europe and Asia. LNG exports are expected to continue at high levels into 2022, averaging at 11.3 Bcf/d, up 16% from 2021.
- Natural gas inventories in January 2022 ended at 2.3 Tcf, falling below 5-year average due to colder-than-normal temperature. The inventories are expected to fall by c.730 Bcf for the rest of the withdrawal season, ending March below 1.6 Tcf, which would be 8% less than the 2017-21 average for the time of the year.

U.S. STORAGE LEVEL

U.S. gas: gas prices expected to remain high amid low storage level

US RIG COUNT VS HENRY HUB PRICE

US OIL AND NATURAL GAS RIG COUNT

Unit: Rigs

HENRY HUB SPOT PRICE

Unit: \$/MMBtu

COMMENT

- Natural gas prices in 4Q21 increased from the previous quarter driven by continued surge in gas demand in Europe.
- Capital spending is expected to increase significantly in 2022 relative to 2021 in response to sustained high crude oil and natural gas prices but remain low in total compared to 2015-2019 average as operators continue to prioritize cash flow maximization.
- With the increase in capital spending, oil and gas rigs are expected to continue to increase in 1Q22, up 29% from 3Q21 but remain at levels 36% lower than 1Q19.
- Henry Hub futures remain around \$4.5/MMBtu levels in 2022 but signal a decline after 1Q23 to around \$3.5/MMBtu levels.

COAL DEMAND AND SUPPLY CHANGE – 2022E VS 2021

Unit: Mt ■ SUPPLY ■ DEMAND

Note: *Demand in other countries driven by Vietnam, **Russia exports to non-CIS countries only, JKT = Japan, South Korea and Taiwan

TRENDS

DEMAND

Spike in coal prices exceeded our expectations primarily due to unexpected supply issues. Coal demand is expected to grow on continuing economic recovery but at a slower pace. High natural gas prices support coal demand and price.

- **China:** Strong growth in domestic coal production and expected weaker economic growth in 2022 will hamper imports. Government's intervention to stabilize coal price, import control and unofficial ban on Australian coal imports are expected to persist.
- **India:** Ongoing economic growth and increasing power demand points to growing coal imports. Prioritization of domestic coal for the power sector due to insufficient supply, leaves non-power sector to rely on imports.
- **JKT:** Cold weather and high gas prices led to a rise in coal demand at the start of 2022. But overall import demand is expected to be steady with downside risk on coal curtailment in South Korea and Taiwan.
- **Europe:** High gas prices, poor gas supply, cold weather and a shortage of alternative power sources supported coal demand into 2022.

SUPPLY

Global markets were short of coal in January due to Indonesia's coal export ban. Geopolitical tension, weather disruptions and further transportation issues in South Africa, Russia and Colombia will continue to contribute to a tightened coal market.

- **Indonesia:** January export ban, new export control regulations and high domestic demand will tighten availability for export but the loss tonnage in January is expected to recover in the later part of the year.
- **Australia:** adverse weather tighten supply while Omicron outbreak in New South Wales impacted coal supply chain and worsen coal supply.
- **Others:** Rail issues are expected to improve in South Africa and Russia. A slow ramp-up out of Colombia exports with uncertainty over mines performance. Most US coal suppliers and transportation providers have reached maximum output with little to no room for additional short-term growth, despite high prices.

Banpu ASPs vs thermal coal benchmark prices

BANPU ASP VS BENCHMARK PRICES

COMMENTS

- Seaborne thermal coal market has been extremely volatile during 4Q21, mainly due to the sudden policy changes in China, strong gas price, coupled with the supply tightness in major coal export countries.
- China continues to play a major role in the global thermal coal market. In Oct., NDRC introduced stricter regulations to control domestic thermal coal price, at the same time, relaxed the regulations for most of the coal miners to increase coal production. As an initial result of these efforts, domestic market prices dropped from RMB2000 levels to below RMB1000 within 4 weeks. This was one of the most important factors that weakened the international thermal coal market in Oct.-Nov 2021
- Since mid-late Nov 2021, the market recovered significantly, supported by the supply shortages in major coal export countries. Particularly due to weather conditions in NSW, Australia and Kalimantan, Indonesia. As a direct result, GCNewc surged significantly in Dec 2021, and the tightness of supply is expected to continue for the foreseeable future.
- Group ASPs in 4Q21 continue to increase, particularly for export portions.
- Key price metrics:
 - ITM ASP 4Q21 : US\$144.1/t* (+28% QoQ)
 - CEY ASP 4Q21 : A\$122.2/t* (+23% QoQ)
 - ASP Domestic A\$74.6/t (-1% QoQ), ASP Export A\$202.5/t (+24% QoQ)
 - NEX (March 4, 2022)**: US\$350.8/t

Note: *Includes post shipment price adjustments as well as traded coal

Banpu Mining: operational summary

2022E COAL OUTPUT

ROM PRODUCTION AND KEY UPDATES

- Covid-19 substantially impacted production (and sales) in 4Q21.
- Northern operations production was down, with a geological issue resulting in a 600 kt shortfall against budget.
- Despite the challenging weather, 4Q21 production increased by 7% QoQ and 6% YoY. Lower expected production in 1Q22 is due to lower contribution from Indominco and delayed production of new GPK mine.
- Gaohe: Stable production in Q4 amidst strong demand and supply tightness.
- Hebi: Slightly lower production in Q4 due to longwall change.

Banpu Mining: average production cost breakdown

AUSTRALIA COAL – AVERAGE PRODUCTION COST¹

Unit: A\$/t

- 4Q21 unit costs were primarily impacted by a 24% reduction in ROM production from 3Q21 levels.
- Project Challenge delivered cost savings and CAPEX reductions across all departments. Initiatives were delivered by mine design optimization to reduce development costs and reductions in contract labor.
- Focus remains on improving production and cost performance.

INDONESIA COAL – AVERAGE TOTAL COST²

Unit: US\$/t

- Average total cost per ton (excl. royalty) rose to \$53/t in 4Q21 due to increase in fuel price and additional equipment rental at Jorong for infrastructure repair due to flooding.
- Royalty costs increased alongside strong coal price during 4Q21.

Banpu Energy Technology: 4Q21 and recent updates

NEW COMMERCIAL OPERATIONS

PMC Label Materials' solar rooftop with total capacity of 446.4 kWp has been operating since October 2021.

PROGRESS OF FLOATING SOLAR 16 MW

The 16 MWp floating solar project with Tribeca Enterprise has been 95% completion with PV panel & main equipment installed, expected COD within 1H 2022.

DIVESTMENT FROM SUNSEAP COMPLETED

Divestment completion of 47.5% shareholding in Sunseap to EDPR, a listed renewables company incorporated in Spain.

REMOTE ISLAND DECENTRALIZED MICROGRID FOR 24-HOURS OF STABLE AND CLEAN ENERGY ACCESS

Banpu NEXT installed an 'all-in-one' microgrid system for Mali Resort, in Koh Lipe – allowing it to utilize 100% clean energy to reduce energy costs, lower pollution, and improve business sustainability.

The microgrid uses an integrated digital platform to provide customers with accurate real-time monitoring and automated control functions.

LAUNCHED E-BOAT FOR SUSTAINABLE WATER TOURISM

As part of the Smart Energy Solutions for Sustainability vision, Banpu NEXT launched a new e-boat that is fully powered by clean energy. The new model is smaller than the previously launched e-ferry and has a cruising speed up to 12 knot and 3-hr battery life per fully charge.

INVESTMENT IN UMT 2nd FUND RAISING

Invested THB256 M in UMT, an e-tuktuk ride sharing platform provider, for scaling up e-tuktuk fleet operation from 165 to 1000 units. Banpu NEXT shareholding in UMT is 39.3%.

ACQUISITION OF 49% SHAREHOLDING IN SOLAR ESCO JSC – SOLAR ROOFTOP POWER PLATFORM

INVESTMENT OVERVIEW:

Investment of US\$14.5 M, equivalent to 49% shareholding in Solar Esco JSC, a leading solar rooftop platform with decades of experience in developing, constructing, and providing EPC and O&M services for C&I customers in Vietnam. The transaction completion is expected in 2Q 2022.

Solar rooftop portfolio - 62.1 MW* portfolio capacity

6.4 MW operational capacity, 3.6 MW under construction capacity and 52 MW in pipeline capacity between 2022-2024*

Long-term corporate PPA with large C&I customers

Including Amata, a leading industrial estate developer, and Vincom, one of Vietnam's largest retail center and real estate developer.

KEY INVESTMENT RATIONALE:

VIETNAM: ENTRY INTO HIGH GROWTH RENEWABLES MARKET

Geographic expansion of energy technology service to Vietnam, which has high renewables growth and favorable solar potential.

GROWING SOLAR ENERGY TECHNOLOGY CAPABILITIES

Improving end-to-end solar rooftop development capabilities from EPC to O&M.

SYNERGISTIC VALUE CREATION WITH BANPU NEXT

Leveraging Banpu NEXT's ESS, energy management, and e-mobility capabilities, combined with Solar ESCO's know-how on solar EPC, O&M, and PV modules supply chain, to capture co-development opportunities in Vietnam such as solar panel installations, community-scale microgrid systems, smart home integration, etc.)

Energy technology 2021: growing our energy ecosystem

APPENDIX

Natural gas: reserve and production term

Reserve

DEFINITION

- Natural Gas Reserve Definitions in the US are defined by the SEC and are the same as used for oil:
 - Proved Developed Producing (PDP)
 - Proved Developed Not Producing (PDNP)
 - Proved Undeveloped (adjacent to a producing well) (PUD)
 - Probable (in the same area as production but not adjacent) (PROB)
 - Possible (contingent on additional drilling) (POSS)
- Reserves have to be economically viable.

Production

PRODUCTION UNIT

- In the US, production is measured in 1000 cubic feet (MCF)
 - 1000 MCF = 1 MMCF
 - 1,000,000 MCF = 1 BCF
 - 1000 BCF = 1 TCF
 - 1 MCF = 28.3 Meters³
 - 1 MCF = 1.0 Million BTU (MMBTU) or Decatherms (dry gas)
 - 1 BCF = 1.0 Trillion BTU
 - 1 Meter³ = 35.3 MCF
 - 1 Billion Meters³ = 35.3 BCF

2022 indicative guidance

ILLUSTRATIVE AND INDICATIVE ONLY

NET BACK

UNIT GUIDANCE (US\$/MCF)		COMMENTS
REVENUE		
<i>Reserves (Tcf)</i>	3.5 – 4.5	
<i>Production volume (Mmcfd)</i>	600 – 700	
Average differential to Henry Hub	\$0.10 - \$0.30	Difference selling points and Henry Hub (NYMEX basis)
GCP&T costs	\$0.86 - \$1.28	Gathering, compression, fractionation and transportation costs
Pipeline revenue	\$0.04 - \$0.06	Applicable to Chaffee Corners volume only
COSTS		
Lease operating expenses and production taxes	\$0.50 - \$0.74	Main component of operating costs
G&A	\$0.28 - \$0.42	Recurring general and administration costs
Taxes	21%	Currently benefit from tax shield from DD&A
DD&A	\$0.43 - \$0.65	Depreciation, depletion and amortization
Drilling and completion costs	\$0.22 - \$0.28	Costs incurred to drill and to make the well ready for production

China: strong import demand despite rising supply

CHINA THERMAL COAL IMPORTS/EXPORTS*

Unit: Mt

Sources: Banpu MS&L

CHINA DOMESTIC COAL PRICES

Unit: RMB/t

Note: *Includes lignite but excludes anthracite imports/exports
Source: www.sxcoal.com/cn 13 January 2022

4Q21

- QHD price rose to RMB2,500/t in October on strong demand due to colder-than-usual weather amid tight supply.
- But the rise turned to a fall in the last 10 days of October after the government considered applying China's price law to regulate coal prices caused the QHD price dropped to RMB801/t at the end of Q4.
- Significant increase in domestic coal supply and reduced power demand helped to stabilize coal price.
- China has restricted power supply to energy-intensive sectors since the second half of September which made thermal generation growth increase at a much lower rate on the year.
- China also cut supply to non-power consumers such as coal-to-chemicals and cement manufacturers in order to prioritize supply to utilities.
- A sharp decline in domestic coal prices has prompted some Chinese utilities to default or threaten to default on cargoes that had previously been purchased. This led to a significant drop of seaborne coal prices as sellers have to find an alternative buyer.

OUTLOOK

- Indonesia's January coal export ban has created limited supply shocks to Chinese consumers. Some coastal utilities are stepping up on restocking with domestic coal in the absence of Indonesian coal resulted in a sharp rise of domestic coal prices.
- Gencos have been ordered to maintain high coal stockpiles to guarantee power generation during the Beijing Winter Olympics and throughout the upcoming annual parliament meeting in March.
- A sharp rise of coal prices forced government to stabilize coal prices again by asked miners to keep prices below RMB900/t (\$141.73/t) at ports, and below RMB700/t (\$110.24) at mine gates.
- With a slower economic growth and a sharp rise of domestic coal production will turn Chinese coal market into oversupply in the later part of this year. This will lead to lower import demand. However, landed cost of imported coal into coastal area is expected to remain competitive against domestic coal.

India: high coal prices diminish imports

INDIA THERMAL COAL IMPORTS*

Unit: Mt

Note: *Includes lignite grade imports
Source: Commodity Insights, Banpu MS&L

4Q21

- Total electricity generation grew by 2.3% year-on-year in Q4 with the growth in coal-fired generation at 2.4%, whereas hydro and nuclear generation recorded impressive growth while gas-fired generation declined significantly owing to the sharp increase in LNG prices.
- India has significantly ramped up domestic coal output in Q4 with thermal coal production at 194 Mt, up 9.9% year-on-year. Coal dispatches were 213 Mt, and grew 16% on the year.
- Despite high production and dispatches, coal stocks at power plants remain below a comfortable level.
- Surge in seaborne coal prices also limited the options to bridge the gap through imports. Many imported coal-based plants were forced to either shut down or operate at lower utilization rates during the first two months of Q4.
- Despite government prioritization of domestic coal supply to the power sector, the Ministry of Power urged generators to begin importing again to avoid a repeat of last year's critically low coal stocks.
- Although supply to the non-power sector gradually improved, demand still significantly outstripped supply. As such, non-power sectors were forced to meet their coal requirements through costly imports.

Outlook

- However, with an improvement in domestic supply and declining contribution from alternative generation sources, the outlook for coal-fired generation in Q1-2022 remains strong.
- Ministry of Power has allowed incremental fuel cost pass-through in electricity tariffs in November 2021, coal imports by the power sector should improve.
- Coal India (CIL) has set a target to increase coal stocks at power plants to 45 Mt by the end of Q1. This will leave the non-power sector continuing to rely on the seaborne market.
- We expect a firm thermal coal import demand outlook through 2022.
